## PROFILE

I am a software developer with a background in fabrication and manufacturing. I am 29 years old and have had the opportunity to experience many different workplaces over my working career. I have experience working under management and experience managing people as well. I keep calm under pressure and always strive to communicate with clients and colleagues in a mindful and meaningful manner. I enjoy working in teams but I can confidently work independently as well. I have the ability to learn new skills quickly and I always aim to reinforce those skills by helping others with learning them. In my spare time you can find me either coding personal projects, at the gym or working on other creative projects that I like.

---
